Experience

Software Engineer in Test

Genesys – Remote

06/2022 – Present

- Developed a Java-based automation framework to validate data integrity during large-scale migrations from Elasticsearch to DynamoDB.
- Implemented validation tests during integration of Apache Iceberg with AWS Data Lake and ensured consistency in the data transformation pipeline for large datasets.
- Automated RESTful API endpoint tests to verify backend functionality and support internal software tools.
- Built data creation jobs and pipelines using Java, AWS, and Jenkins by generating data through APIs and storing results to S3.
- Ensured production software stability by validating API and pipeline performance and confirming data correctness in pre-production environments.

Software Engineer

Blueprint Test Prep – Remote

07/2021 – 01/2022

- Deployed code on CI/CD pipelines and developed REST API endpoints using Go and AWS.

Education

Portland State University – 2021

Computer Science – Bachelor of Science

GPA: 3.69, Cum Laude

Skills

Languages: Java, Python, Go, C++, GraphQL

Technologies: AWS (S3, DynamoDB, EMR), Jenkins, TestNG, Postman, Apache Airflow, New Relic, Sumo Logic
